

## **AFFF Foam Fire Extinguishers**

AFFF (Aqueous Film Forming Foam) fire extinguishers are ideal for any office environment.

The dual Class A and Class B rating of foam extinguishers allows them to be used against both solid and liquid burning fires. These extinguishers also have a conductivity rating of 35kV which means that, although they are not designed for use on electrical fires, they can be safely used on typical electrical office equipment.

The reason that an “aqueous” medium can be used on electrical equipment is that the method of delivery is by a spray nozzle which breaks up the flow of extinguish-ant. This prevents a continuous electrical path between the user and the electrical apparatus.
